TIGER TRAINING INTRODUCTION

Louisiana Department of
Corrections

Targeted Interventions to Greater Enhance Re-entry

RNR

18 Components of the RNR Model

Overarching Principles

1. Respect for the person
2. Theory
3. Human service
4. Crime prevention

RNR

5. Risk
6. Need
7. Responsivity (general + specific)

Structural Assessment

8. Assess RNR
9. Strengths
10. Breadth
11. Professional discretion

Program Delivery

12. Dosage

Self-Practices

13. Relationship skills
14. Structuring skills

Organizational

15. Community-based
16. Continuity of service
17. Agency management
18. Community linkages

The RNR Model Is Broken Down into Risk, Need, and Responsivity Principles

RISK: Probability of an event occurring

CRIMINOGENIC RISK: Probability of criminal recidivism; typically, the probability of being arrested for or convicted of any new crime or returned to custody for a technical violation. Match the level of service to the person's risk to reoffend. Provide people at a moderate or high risk of reoffending with cognitive programming. Keep low-risk people out of intensive cognitive services to avoid interfering with existing strengths and/or increasing association with others at a higher risk to reoffend.

RISK does NOT mean harmfulness or seriousness of the event, violence, or dangerousness

The RNR Model Is Broken Down into Risk, Need, and Responsivity Principles

CRIMINOGENIC NEED does not mean risk of violence or dangerousness or factors that are historical and unchangeable.

CRIMINOGENIC NEED: Criminogenic needs are dynamic characteristics that are associated with a person's risk of reoffending. These include procriminal thought patterns, procriminal associates, family and marital relations, and substance use disorders.

The RNR Model Is Broken Down into Risk, Need, and Responsivity Principles

RESPONSIVITY: Clinical syndromes, impairments, or social service needs that usually do not cause crime but can interfere with habilitation. These can include homelessness, serious or persistent mental illness, drug or alcohol cravings/withdrawal, PTSD, or TBI.

RESPONSIVITY: Maximize the person's ability to learn from a habilitative intervention by providing cognitive behavioral treatment and tailoring the intervention to the person's learning style, motivation, abilities, and strengths.

- **General:** Use cognitive, social learning methods to influence behavior.
- **Specific:** Modify strategies in accordance with the strengths, motivations, readiness to change, personality, mental status, learning ability, learning style, circumstances, culture, and demographics of individual cases.

Why have a RNR Assessment Tool?

- Guides programming at all stages of incarceration
- Accurate, valid, shown to work
- Allows evidence based practices
- Reduces recidivism
- Required for the DOC plan to work
- Public safety and fewer victims
- Resource for informed Parole Board decisions

Creating the Risk Tool

- **Development**
 - Large data sample (all releases between 2010-2015)
- **Validation**
 - Validated on DOC data for the population being studied
 - Recidivism as a return to custody on a new conviction within 3 years

The Major Risk Factors

Static Factors	Major Dynamic Risk Factors
Criminal History Number of arrests Number of convictions Type of offenses	Antisocial personality pattern
	Procriminal attitudes
	Procriminal associates
	Substance use disorder
	Family/marital stressors
	Poor school/work performance
	Few leisure or recreation activities

Risk

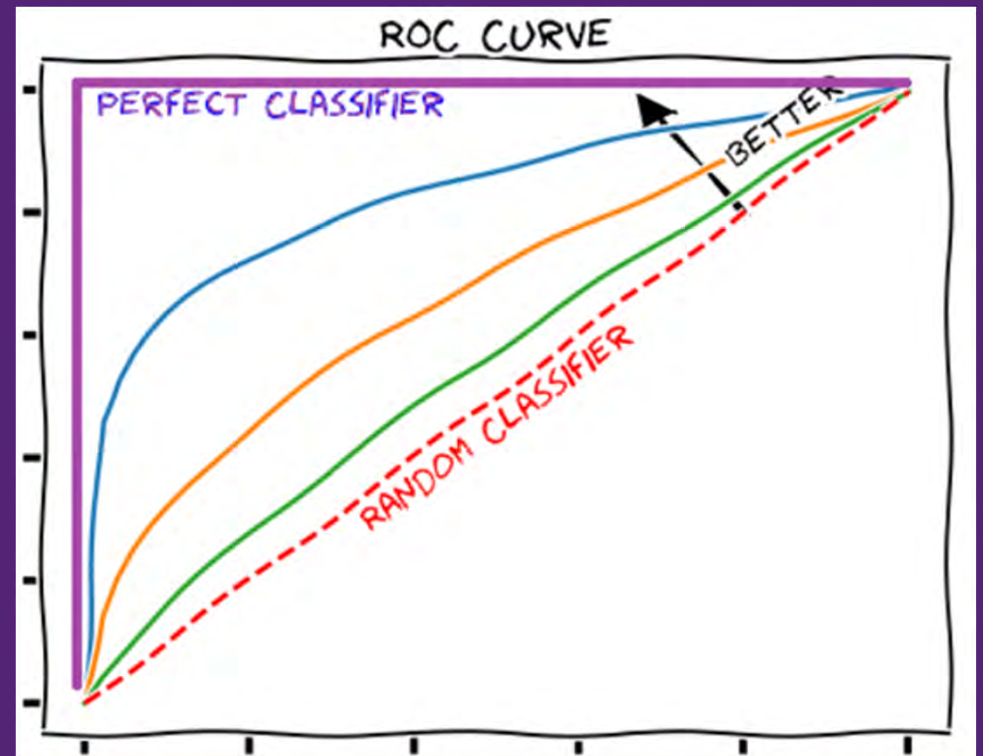

- Measuring Risk
 - ROC
 - Difficulty in predicting individual human outcomes rather than group behavior/outcomes

How TIGER Measures Up

- Institutional: 0.876
- Supervision: 0.787
- Mature Long-Term: 0.926
- Dynamic Risk: 0.7197
- LARNA: 0.62
- TIGER 1.0: 0.78

Why would someone's score change

- Change in population over 20 years
- More specific questions
- Stronger tool
- LARNA is not TIGER

Creating the Needs Tool: Factors/Domains

- Antisocial thinking
- Antisocial peers
- Substance abuse
- Depression
- Mental health
- Trauma/PTSD
- Self-efficacy
- Education/Vocational skills
- Employment
- Family/Parenting
- Remorse/Empathy
- Transportation
- Financial & Housing stability

Responsivity: Hierarchy of Needs

Substance Abuse Treatment

Mental Health
(including trauma & depression) 15-30 days

Education

Antisocial Thinking/Remorse/Empathy

Antisocial Peers/Gangs

Self-Efficacy/Motivation

Family/Parenting

Employment/Housing

Financial Stability

Transportation

Needs Assessments

- **Mini Assessment**
 - Reduced needs assessment to 69 questions
 - Five Domains examined
 - Antisocial thinking / antisocial peers
 - Substance abuse
 - Mental health and depression
 - Education
 - Employment

The Need Principle: Focus on Dynamic Criminogenic Needs to Create Positive Behavior Change

Major Dynamic Risk Factors	Need
Antisocial personality pattern	Build self-management skills, teach anger management
Procriminal attitudes	Counter rationalizations with prosocial attitudes/build prosocial identity
Procriminal associates	Replace with prosocial friends and associates
Substance use disorder	Reduce use; enhance alternatives to using substances
Family/marital stressors	Teach parenting skills; enhance capacity to care
Poor school/work performance	Enhance work/study skills and nurture interpersonal relationships at school or work
Few leisure or recreation activities	Encourage participation in prosocial activities, hobbies, and sports

Targeted Interventions to Greater Enhance Re-entry

Different tools are used for measuring different things

A tape measure is used to measure length or distance.

A stopwatch is used to measure time.

A thermometer is used to measure temperature.

Targeted Interventions to Greater Enhance Re-entry

Reliability

Results
are
consistent.

Validity

Results
satisfy
objectives.

Targeted Interventions to Greater Enhance Re-entry

Reliable
Valid

Putting it Together

- Better Assessment of Risk and Needs
- Appropriate Treatment
- Better Outcomes
- TIGER is a Decision Informing Tool Not a Decision Making Tool
- Never Overrides the “Person in the Loop”

Targeted Interventions to Greater Enhance Re-entry

Substance Abuse

Ignoring Assessment Results and RNR Can Result in Over-Programming

Multiple studies across the country have shown that supervision staff practices are often misaligned with research on RNR and associated agency trainings.

The problem is not that staff use the assessments to make case planning decisions, but that they ignore or override the results, which leads to overrating the potential for recidivism and over-responding to client needs through focusing on the wrong needs or making unnecessary program referrals.

Ignoring the assessment results creates greater disparity in responses compared to following the recommendations of a correctly validated tool that is used on the intended population for the intended reason the tool was developed.

Where are we going next

- Gender Responsive Model
- General Risk Tool Update
- Crime Type Specific
- Disciplinary Data
- Program Completion Data
- Inclusion of More Supervision Data
- Needs Update
- Treatment Pathways Update
- Dynamic Risk Update
- Gender Invariance for Updated Needs
- Updated Concurrent Validity with TCUDS 5

GENERAL PURPOSE ANSWER SHEET
form no. 16485

form no. 16485

IMPORTANT MARKING INSTRUCTIONS

- Use black lead (No. 2) pencil. Do not use ink pens.
- Make heavy black marks that fill the circle completely.
- Erase clearly any answer you wish to change.
- Make no stray marks on this answer sheet.
- For each question; T = True, F = False. If that does not pertain, use A through E.
